

We are creating a mobile game that can be deployed on Android tablets at Clayton Home Centers. The game is intended for children ages 7 - 12 and will teach them about the home design, building and delivery process that is used by Clayton Homes. The player will start by designing and building their home by design their floor plan and playing minigames to build the walls, install plumbing, etc. The player will then play a minigame where they will drive a truck and deliver the home to its location. Finally they will play a minigame where they will set up the house at the location.
