User Stories Completed This Iteration

- Spike for connecting Unity and GitLab: I conducted a spike to learn how to share a Unity project on GitLab. Unity creates a lot of files that don't need to be shared (such as individual user settings) so it was necessary to learn which files should be committed and pushed and which shouldn't. During the process I learned of a great git user interface that works well with Unity.
- Concept for project charter : I was assigned to write the concept for our product in the project charter
- User stories for project charter: All members were assigned to create user stories and all members contributed
- Release plan for project charter: I was assigned to come up with the release plan and all members agreed to it
- Write the retrospective summary: I wrote the bulk of the retrospective but Grant Lay went through and finished and edited it.

User Stories Started But Not Completed

- None

User Stories Planned But Not Started

- None
